ABOUT

Senior QA Automation Engineer and Tech Lead with 5+ years in fintech, payments, and mobile testing. I cover the entire testing stack — backend, frontend, mobile, infrastructure — and combine hands-on engineering with team leadership.

What I do: - Design and build AI tools for development and testing: an AI agent for auto-generating unit tests and Mock Manager for test environments - Rely on AI (Opencode, Deepseek, Claude Code) daily: test design, log and failure analysis, test data generation, AI-assisted code review - Design and build automation frameworks from scratch: backend (Python), mobile (Kotlin/Appium, Android SDK/emulators) - Own CI/CD quality pipelines (GitLab CI, GitHub Actions): regression runs, parallel execution, Allure reporting, flaky test management - Drive quality metrics: DDE, defect density, test coverage, autotest stability, execution time - Lead a team: mentoring, code reviews, workshops, technical strategy

Where I'm heading: I want to grow into a **staff engineer with deep technical expertise**, including in AI. I'm interested in AI products and fintech, where AI test automation directly impacts release speed and quality.

SKILLS

Area	Technologies
Languages	Python, Kotlin, TypeScript/JavaScript
Mobile	Appium, Android SDK, iOS/Android testing, Emulators
Backend & API	FastAPI, Pytest, REST API, Postman, microservices
AI tools for dev & test	Opencode, Deepseek, Claude Code, LLM integration, AI-assisted code review, prompt engineering, AI test generation
CI/CD & DevOps	GitLab CI, GitHub Actions, Docker, Kubernetes, Allure
Testing	Functional, integration, regression, performance, load, E2E, BDD (Gherkin), RCA
Leadership	Team management, mentoring, code review, technical strategy

EXPERIENCE

WB Bank (Wildberries Bank) — Senior QA Automation Engineer / Tech Lead

Present

Leading a team of 5 QA engineers, building the automation process from scratch and owning quality for high-load payment services.

- Lead a team of 5 QA engineers: mentoring, code reviews, technical strategy, and career development
- Design and build AI tools for testing: an AI agent for auto-generating unit tests and **Mock Manager** for test environment management

- Increased unit test coverage from 30% to ~90% in a year using an AI agent for test automation
- Wrote integration and E2E scenarios from scratch; introduced coverage measurement in CI and automated integration test runs on every MR
- Cover the full stack: backend (Python), mobile (Kotlin/Appium, Android emulators), API, integration, regression, performance
- Drive quality metrics: DDE, defect density, test coverage, autotest stability, execution time
- Built an AI-driven workflow: Opencode, Deepseek, Claude Code for test design, log/failure analysis, and test data generation
- Reduced test documentation and data preparation time by ~90% using AI agents (Opencode, Deepseek, Claude Code)
- Cut average MR review time by ~50% through AI-assisted code review
- Built **Mock Manager** — internal AI tool for test environment and test data management
- Design and execute end-to-end load testing; analyze bottlenecks at DB, API gateway, and microservice levels
- Own CI/CD quality pipelines (GitLab CI, GitHub Actions), Allure reporting, flaky test management
- Conduct internal workshops on automation, CI/CD debugging, and AI adoption in testing
- Participate in architectural and code reviews, identifying testability issues, edge cases, and performance risks before implementation

Yandex.Fintech — SDET (DWH Project)

2024–2025

Worked on a DWH project in fintech: validated ETL pipelines and analytical models.

- Validated ETL pipelines and analytical models on a DWH project in fintech
- Built and maintained integration and E2E test suites integrated into CI/CD pipelines (GitLab CI)
- Owned test execution pipelines: monitored daily runs, analyzed failures, fixed flaky tests, ensured stable regression coverage
- Validated banking and payment microservices with 99.9% uptime requirements
- Used Kotlin and Appium for mobile testing of fintech flows
- Adopted AI tools to speed up failure analysis and test data preparation
- Participated in all SDLC phases: requirements review, test planning, execution, production monitoring

T-Bank — Automation QA Engineer

2023–2024

Automated validation for a partner acquisition platform handling 10,000+ external integrations.

- Automated validation for a partner acquisition platform handling 10,000+ external integrations
- Built and maintained API and integration test suites covering core business flows
- Implemented test data setup and teardown utilities, improving test reliability and repeatability
- Reduced post-release critical bugs by 25% through early test involvement and requirement analysis
- Collaborated with developers, product managers, and analysts in cross-functional Agile teams
- Participated in the full SDLC: requirements review, test planning, execution, release validation

MTS — Intern → Middle QA (Internal Products)

2022–2023

Started as a manual QA intern, promoted to Middle QA within 18 months.

- Started as a manual QA intern, promoted to Middle QA within 18 months
- Took end-to-end quality ownership for 3 internal services, reporting directly to the development lead

- Performed functional, regression, and integration testing across internal products
 - Created and delivered internal technical courses on test automation for 10+ junior colleagues
 - Built the foundation for my automation career: Python, test design, CI/CD basics
 - Collaborated with developers, analysts, and product owners in cross-functional Agile teams
-

PROJECTS

SaaS for Marketplace Sellers (Ozon, WB, Yandex.Market) — Founder / Full-stack Engineer

Side project

- Building a SaaS product for seller-side automation on major marketplaces
- Integrating Ozon, Wildberries, and Yandex.Market APIs: orders, stock, pricing, returns
- Full-stack ownership: architecture, backend, frontend, infrastructure
- Own the product end-to-end — from idea to production

Sports Gamification Startup (Early-stage, NDA) — Mobile QA Engineer

Side project

- Developed a mobile app from scratch and published it to App Store and Google Play
 - Designed and executed test strategies for iOS and Android (functional, regression, in-app purchases)
 - Built and maintained manual and automated test suites
 - Conducted device compatibility testing across a wide range of devices and OS versions
-

EDUCATION

Moscow Technical University of Communications and Informatics (MTUCI) Automation of Business Processes. Computer Security.

ADDITIONAL

- **Languages:** English (professional working proficiency), Russian (native)
- **Availability:** 2 weeks notice
- **Preferred collaboration:** B2B / Contract (ИП)
- **Remote-ready:** Full setup for distributed collaboration, experience with async communication
